GPR300 for high-quality Seismic data for reservoir optimization

GPR300, a new nodal seismic acquisition solution by Sercel is specially designed for deployment in shallow waters down to depths of 300 meters. Compact and lightweight, GPR300 features Sercel's unique QuietSeis® broadband digital sensor technology for ultra-quiet performance and unmatched digital fidelity. Its ability to record high-fidelity low-frequency signal also makes it the ideal choice for high-end seismic imaging with full-waveform inversion. Additionally, its omni-tilt sensor package corrects for node inclination on the seabed, ensuring the most accurate 3C recording.
